Resolución práctica Ansible - Jairo Rivera

1.

2.

```
root@debian-10:/etc/ansible# cat apache.yml
- hosts: all
  remote_user: root

tasks:
- name: "instalar Apache"
  shell: /usr/bin/apt install apache2 -y
  register: apache
- name: "salida apache 2"
  debug: msg="{{ apache.stdout }}"
- name: "Reiniciar servicio Apache"
  shell: /usr/bin/systemctl restart apache2
  register: apache-restart
```
